# Color Selector

**Jamestown** finishes its laboratory furniture and fume hoods with a high quality powder painting process. We have the ability to paint textured metal or smooth, cold rolled steel. The powder coating has excellent chemical and abrasion resistant characteristics. Color reproductions shown here may vary slightly from actual applications with minor sheen and color shift due to the process. Each of the standard seventeen colors are coded with a 3-digit number. Please use this number when referring to the color.

Process controls ensure that a quality finish is applied to our product. However, some variations will occur in the gloss level and in normal tolerances in pigments as well as tolerances in the finishing equipment. In reviewing these colors, allow for these variations. Research has shown that all finishes are subject to color change, depending on age and exposure to light. Please consider this and the lighting conditions in which the samples are being viewed when comparing samples and furniture.

## Two Tone Available

We offer the option to have the cabinet and the doors/drawers painted a different color at no extra cost. If you desire a color other than these shown, contact your dealer for additional costs and delivery information. Detailed specifications and test results are available from your local dealer.

**Jamestown Metal Products** delivers the finest laboratory casework, fume hoods and custom specialty steel solutions to laboratories, universities, pharmaceutical companies worldwide, and government agencies.

Our customers trust us to deliver high quality laboratory solutions they can depend on – today and tomorrow.
